6 Limit Switches	4
7 Specification	see data sheet in the appendix

1 Introduction

Series PMR02 / PMR04 pressure gauges are noted for their reliable function and easy operation. To obtain the greatest benefit from this device, please observe the following cautionary statement:

Persons who are responsible for setting up or operating this device must be sure to read the and understand the operating instructions and the safety information pertaining to it.

2 Safety Information

2.1 General Instructions

To ensure safe operation, the device must only be operated according to the information in the operating instructions. When the device is in use, the regulations and safety standards applicable to the specific application must also be observed. This statement also applies to the use of accessories.

2.2 Proper Usage

Series PMR02 / PMR04 pressure gauges are designed for measuring and monitoring process pressures. Any application extending beyond this specific intended use does not constitute proper usage. Series PMR02 / PMR04 must not be employed as the sole means of avoiding hazardous conditions in machinery and installations.

The machinery and installations must be designed in such a manner that faulty conditions and malfunctions will not present hazardous situations for operating personnel.

2.3 Qualified Personnel

Series PMR02 / PMR04 must only be used by qualified, knowledgeable personnel trained in correct use of these devices. Qualified personnel are those persons familiar with setting up and assembling these devices, placing them in service and operating them. In addition, such personnel must also be qualified to perform the work associated with the application for which the device is being used.

3 Functional Description

A coiled, drawn brass or stainless steel tube filled with the fluid or gas being monitored is deformed to an extent depending on the pressure exerted by the fluid or gas. The resulting movement of the coil is transmitted to an indicator mechanism with a graduated display.

4 Installation

For connections with cylindrical screw threads, use suitable gaskets to seal the pressure gauge connections to the sealing face. For connections with tapered thread (e.g. NPT screw thread), apply a sealing component such as Teflon tape directly to the screw threads (EN 837-2). In order to be able to bring the measuring device into a position where it can be most easily read, we recommend the use of a tension bushing or gland nut.

During installation and removal, pressure gauges must not be turned by the housing. Be sure to only tighten and loosen gauges with suitable wrenches at the hexagonal drive points provided for this purpose.

If the pressure gauge is to be installed below the pressure tapping point, then the process line must be thoroughly flushed out first to remove any foreign objects before the gauge is installed. Some device models have a pressure-relief opening that can be vented and closed to equalize the internal pressure. In as-delivered condition, this pressure-relief opening is closed. Before checking these devices and/or after installation but before placing them in service, these devices must be vented (refer to label on housing). When pressure testing or purging piping systems or tanks, make sure that the pressure gauge is not subjected to pressure beyond the upper scale value. If this cannot be ensured, the pressure gauge must first be isolated or removed from the system. Before removing the pressure gauge, be sure to relieve the pressure in the measuring element. To do this, it may also be necessary to relieve the pressure in the process line.

Caution: Exposure to residue and deposits of materials being measured may pose a danger to people, the environment and the apparatus.

Be sure to follow proper safety procedures. Pressure gauges with measuring elements filled with water or mixtures containing water must be protected against frost.

5 Maintenance

Mechanical pressure gauges are maintenance-free.

The measuring accuracy (as defined per DIN EN 837) of the pressure gauge should be checked regularly. Inspection or recalibration should only be performed by trained, qualified personnel with suitable equipment.

Caution: If the pressure gauge is being used to monitor **hazardous substances** such as oxygen, acetylene, flammable or combustible materials, or poisonous materials and/or being used in **refrigeration systems, compressors**, etc., then the regulations applying in such cases must be also be observed in addition to the ones generally applicable. Be sure to take appropriate precautions and follow proper safety procedures.

6 Limit Switches

6.1 Magnetic spring contact

The electrical connection must only be installed by trained, qualified personnel. The connection assignments and the circuit functions are indicated on the device model plate. The connecting terminals (1 through 6) and the ground terminal are also identified. The lines connected to the main power source must be sized to handle the highest power consumption of the device and must comply with the IEC 227 or IEC 245 electrical codes. The necessary electrical data and specifications can be found in the appendix to these instructions.

Caution: When installing these devices, placing them in service and operating them, be sure to observe all applicable national safety standards (e.g. German standard VDE 0100). Any and all work must only be performed with the system de-energized. Failure to observe the applicable regulations may result in severe bodily injury and/or property damage. Only trained, qualified personnel may work on these devices.

6.2 Setting the setpoint indicator

The setpoint value is set at the view window with the supplied adjustment wrench. The setpoint indicators for the limit switch can be freely adjusted as required throughout the entire scale range. To ensure the switching accuracy, switching reliability and service life of the mechanical measuring systems, the switching points should not be set in the areas from 0 to 10% or from 90 to 100% of their respective measuring range.

6.3 Inductive contact

The setpoint value is set at the adjustment lock in the viewing window by means of the adjustment wrench (supplied).

The connection assignments and the circuit functions are indicated on the device model plate. The setpoint indicators for the limit switch can be freely adjusted as required throughout the entire scale range. To ensure the switching accuracy, switching reliability and service life of the mechanical measuring systems, the switching points should lie within 10% and 90% of the measuring range. The necessary electrical data and specifications can be found in the appendix to these instructions.

PMR02

Bourdon Tube Pressure Gauge - Mini

- nominal size 60 mm
- accuracy class 1,6
- steel or stainless steel housing
- brass movement and connection or stainless steel
- filled or unfilled
- protection class IP65
- measuring range of -1200...0 mbar to 0...1000 bar

Description:

The bourdon tube gauges of the PMR02 series can be supplied in brass or stainless steel, filled or unfilled.

A drawn brass or stainless steel tube formed into a spiral is filled with the medium and deforms depending in the pressure. This movement is indicated by a pointer measuring mechanism, which can be damped by means of the optionally available glycerine filling, so that vibrations or oscillations are only shown to advantage in a greatly reduced form. The wear of the moving parts is also reduced by the natural lubrication of the glycerine, and the penetration of corrosive gases and the formation of condensation water is prevented.

The stainless steel design allows pressure measurement even in the most aggressive liquids and gases. The pressure gauges are optionally equipped with a G ¼ A threaded connection at the bottom or rear.

Typical applications:

Bourdon tube pressure gauges are used throughout industry and are particularly suitable for measuring points where no electrical supply is available. PMR02 series pressure gauges, in steel or brass design, are often used especially in mechanical and plant engineering, on pumps, compressors or BHKW's, since only light requirements are often placed on the media resistance.

The PMR02 stainless steel chemical pressure gauges, on the other hand, are resistant to much more aggressive media and are often used in the chemical and petrochemical industries, in the food sector, in pharmaceutical production or in power stations, where they have been delivering the best results for decades.

Models:

Nominal size: housing diameter: 60 mm

Materials:

- PMR02.K: housing made of steel, painted black brass connection
- PMR02.M: housing made of stainless steel brass connection only available with glycerine filling.
- PMR02.E: housing made of stainless steel stainless steel connection

Process connection: G 1/4 bottom or centric rear (steel and brass version) or eccentric rear (st. steel version)

* measuring range not for PMR02.K

** measuring range not for PMR02.M

¹ panel cut-out 65 mm

² panel cut-out 63 mm

³ PMR02.M: black painted rim, optional chrome-plated steel

PMR02.E: stainless steel rim

Order Code:

Order number: PMR02. M. 1. 0. A49. 0

Bourdon tube pressure gauge - mini

Materials:

K = housing steel, connection brass

M = housing stainless steel, connection brass (always with glycerine filling)

E = housing stainless steel, connection st. steel

Process connection:

1 = G 1/4 bottom

2 = G 1/4 centric rear (only PMR02.K and M)

3 = G 1/4 eccentric rear (only PMR02.E)

9 = special connection

Vibration damping:

0 = without

1 = with glycerine filling

Design and measuring ranges:

A17...F88 = see table "Measuring Ranges"

Options and accessories (multiple selection possible):

0 = without

xx = see table „Options and Accessories“

Technical Data:

Housing:

round steel housing, black, or st. steel, d = 60 mm protection class IP45 (unfilled version) protection class IP65 (filled version.)

Vibration damping:

glycerine filling, with pressure relief opening and internal pressure compensation

Measuring element:

PMR02.K: circular bourdon tube up to 60 bar. bourdon tube in screw form from 60 bar

PMR02.M: bourdon tube in circular form, copper alloy, soft soldered into the connection pin, from 100 bar bourdon tube in screw form, stainless steel 1.4571, hard soldered into the connection pin

PMR02.E: bourdon tube in circular form, from 100 bar bourdon tube in screw form, stainless steel 1.4571

Pointer mechanism:

PMR02.K,M: brass, barrel nickel silver

PMR02.E: stainless steel 1.4571/1.4301

Dial:

aluminium, white, black font acc. to EN 837-1

Viewing glass:

PMR02.K: instrument acrylic glass

PMR02.M: Polycarbonat

PMR02.E: laminated safety glass

Accuracy:

class 1,6

Max. media temperature:

PMR02.K: 60 °C

PMR02.M: -25 °C...60 °C

PMR02.E: 100 °C

Overload safety:

PMR02.K: short-term 1,0 times

PMR02.M,E: short-term 1,3 times

Options and Accessories:

Description:	Code	for type PMR02...
rubber protective cap, red	GR	K
rubber protective cap, blue	GB	K, M
double scale (e.g. bar / psi)	SD	all types
refrigerant double scale pressure /R717 (NH3)	SK7	E
