7 Specification	see data sheet in the appendix

1 Introduction

Series PMR02 / PMR04 pressure gauges are noted for their reliable function and easy operation. To obtain the greatest benefit from this device, please observe the following cautionary statement:

Persons who are responsible for setting up or operating this device must be sure to read the and understand the operating instructions and the safety information pertaining to it.

2 Safety Information

2.1 General Instructions

To ensure safe operation, the device must only be operated according to the information in the operating instructions. When the device is in use, the regulations and safety standards applicable to the specific application must also be observed. This statement also applies to the use of accessories.

2.2 Proper Usage

Series PMR02 / PMR04 pressure gauges are designed for measuring and monitoring process pressures. Any application extending beyond this specific intended use does not constitute proper usage. Series PMR02 / PMR04 must not be employed as the sole means of avoiding hazardous conditions in machinery and installations.

The machinery and installations must be designed in such a manner that faulty conditions and malfunctions will not present hazardous situations for operating personnel.

2.3 Qualified Personnel

Series PMR02 / PMR04 must only be used by qualified, knowledgeable personnel trained in correct use of these devices. Qualified personnel are those persons familiar with setting up and assembling these devices, placing them in service and operating them. In addition, such personnel must also be qualified to perform the work associated with the application for which the device is being used.

3 Functional Description

A coiled, drawn brass or stainless steel tube filled with the fluid or gas being monitored is deformed to an extent depending on the pressure exerted by the fluid or gas. The resulting movement of the coil is transmitted to an indicator mechanism with a graduated display.

4 Installation

For connections with cylindrical screw threads, use suitable gaskets to seal the pressure gauge connections to the sealing face. For connections with tapered thread (e.g. NPT screw thread), apply a sealing component such as Teflon tape directly to the screw threads (EN 837-2). In order to be able to bring the measuring device into a position where it can be most easily read, we recommend the use of a tension bushing or gland nut.

During installation and removal, pressure gauges must not be turned by the housing. Be sure to only tighten and loosen gauges with suitable wrenches at the hexagonal drive points provided for this purpose.

If the pressure gauge is to be installed below the pressure tapping point, then the process line must be thoroughly flushed out first to remove any foreign objects before the gauge is installed. Some device models have a pressure-relief opening that can be vented and closed to equalize the internal pressure. In as-delivered condition, this pressure-relief opening is closed. Before checking these devices and/or after installation but before placing them in service, these devices must be vented (refer to label on housing). When pressure testing or purging piping systems or tanks, make sure that the pressure gauge is not subjected to pressure beyond the upper scale value. If this cannot be ensured, the pressure gauge must first be isolated or removed from the system. Before removing the pressure gauge, be sure to relieve the pressure in the measuring element. To do this, it may also be necessary to relieve the pressure in the process line.

Caution: Exposure to residue and deposits of materials being measured may pose a danger to people, the environment and the apparatus.

Be sure to follow proper safety procedures. Pressure gauges with measuring elements filled with water or mixtures containing water must be protected against frost.

5 Maintenance

Mechanical pressure gauges are maintenance-free.

The measuring accuracy (as defined per DIN EN 837) of the pressure gauge should be checked regularly. Inspection or recalibration should only be performed by trained, qualified personnel with suitable equipment.

Caution: If the pressure gauge is being used to monitor **hazardous substances** such as oxygen, acetylene, flammable or combustible materials, or poisonous materials and/or being used in **refrigeration systems, compressors**, etc., then the regulations applying in such cases must be also be observed in addition to the ones generally applicable. Be sure to take appropriate precautions and follow proper safety procedures.

6 Limit Switches

6.1 Magnetic spring contact

The electrical connection must only be installed by trained, qualified personnel. The connection assignments and the circuit functions are indicated on the device model plate. The connecting terminals (1 through 6) and the ground terminal are also identified. The lines connected to the main power source must be sized to handle the highest power consumption of the device and must comply with the IEC 227 or IEC 245 electrical codes. The necessary electrical data and specifications can be found in the appendix to these instructions.

Caution: When installing these devices, placing them in service and operating them, be sure to observe all applicable national safety standards (e.g. German standard VDE 0100). Any and all work must only be performed with the system de-energized. Failure to observe the applicable regulations may result in severe bodily injury and/or property damage. Only trained, qualified personnel may work on these devices.

6.2 Setting the setpoint indicator

The setpoint value is set at the view window with the supplied adjustment wrench. The setpoint indicators for the limit switch can be freely adjusted as required throughout the entire scale range. To ensure the switching accuracy, switching reliability and service life of the mechanical measuring systems, the switching points should not be set in the areas from 0 to 10% or from 90 to 100% of their respective measuring range.

6.3 Inductive contact

The setpoint value is set at the adjustment lock in the viewing window by means of the adjustment wrench (supplied).

The connection assignments and the circuit functions are indicated on the device model plate. The setpoint indicators for the limit switch can be freely adjusted as required throughout the entire scale range. To ensure the switching accuracy, switching reliability and service life of the mechanical measuring systems, the switching points should lie within 10% and 90% of the measuring range. The necessary electrical data and specifications can be found in the appendix to these instructions.

PMR04

Bourdon Tube Pressure Gauge

- nominal sizes 100, 160 and 250 mm
- accuracy class 1,0
- designs with brass connection and stainless steel housing or completely in stainless steel
- with or without liquid filling for vibration dampening
- optional up to 4 magnetic snap-action contacts or inductive contacts
-  Ex- version acc. to ATEX optional
- measuring range from -1000...0 mbar to 0...2500 bar

Description:

Model series PMR04 Bourdon tube pressure gauges can be supplied in brass or stainless steel versions, with filled or unfilled gauges. A coiled, drawn brass or stainless steel tube filled with the fluid or gas being monitored is deformed to an extent depending on the pressure exerted by the fluid or gas. The resulting movement of the coil is transmitted to an indicator mechanism with a graduated display. This movement can be dampened by means of an optionally available liquid filling so that any vibrations have far less impact on the accuracy and stability of the reading. The natural lubricating properties of this liquid filling also reduce wear to moving parts, entry of caustic/corrosive gases and accumulation of condensation. The stainless steel version allows pressure measurement of even the most caustic liquids and gases. These pressure gauges are fitted with a threaded connection at the bottom or on the back. They may also be fitted with up to four limit contacts or with a transmitter for remote transmission of the measured value.

Typical applications:

Bourdon tube gauges are used throughout industry and are especially suitable for taking measurements at locations where there is no supply of electrical power available. Model PMR04 Bourdon tube pressure gauges, with a brass responsive element, are frequently used in industrial machinery and systems, on pumps, compressors, or block-type thermal power stations (BTTPs) since in these applications they only need to meet minimal requirements for withstanding the effects of the media being monitored.

In contrast, PMR04 Bourdon tube pressure gauges of stainless steel are designed to withstand contact with the very caustic/corrosive media often encountered in the chemical and petrochemical industries, the food and beverage industries, pharmaceutical production processes or in power plants, where they have provided the best service for decades. When fitted with the optionally available switching contacts or analogue output, these gauges can also be used for electronic pressure monitoring.

Models:

Nominal sizes: housing diameters 100, 160 or 250 mm

Materials:
 PMR04.M: housing of st. steel 1.4301, measuring element of copper alloy, above 100 bar st. steel, connection of Messing

PMR04.E: housing of st. steel 1.4301, measuring element and connection of stainless steel 1.4571

Process connection: G 1/2 or 1/2" NPT at bottom or on back

Vibration dampening: optional glycerine-, oil- or special filling

Measuring ranges:

Order Code:

Order number: PMR04. 10. M. 1. 0. A75. 0. 0

Bourdon tube pressure gauge

Models:

10 = 100 mm
 16 = 160 mm
 25 = 250 mm

Materials:

M = housing st. steel, connection brass
 E = housing st. steel, connection st. steel
 S = special material, (please specify in plain text)

Process connection:

1 = G 1/2 at bottom
 2 = G 1/2 eccentric on back (not with contact)
 3 = 1/2" NPT at bottom
 4 = 1/2" NPT eccentric on back (not with contact)
 8 = with adapter for connection of a diaphragm seal
 9 = special connection

Vibration dampening:

0 = without
 1 = with glycerine filling
 2 = with oil filling (for devices with contact)

Design and measuring ranges:

A17...F90 = see table „Measuring ranges“

Optional electrical devices:

0 = without
 xxx = see table „Limit contacts“

Options and accessories (multiple selection possible):

0 = without
 xx = see table „Options and accessories“

Technical Data:

Housing: round gauge of stainless steel, d = 100 mm, 160 or 250 mm protection class IP45

Liquid filled design: glycerine filling, (optional other filling), with pressure relief opening and inside-pressure, protection class IP65

Stainless steel version: with pressure relief opening (optional for increased safety with solid baffle wall and blow-out back)

Measuring element:

PMR04.xx.M: bourdon, bis 60 bar copper alloy, soldered, ab 100 bar st. steel 1.4571, brazed
 PMR04.xx.E: bourdon tube of stainless steel 1.4571

Indicator element:

PMR04.xx.M: brass, moving parts of nickel silver
 PMR04.xx.E: stainless steel 1.4571 / 1.4301

Dial face:

aluminium, white, black characters acc. to EN 837-1

Viewing window:

PMR04.xx.M: instrument glass
 PMR04.25.M.x.1/2 Polycarbonate
 PMR04.xx.E: multilayer safety glass

Accuracy:

class 1,0

max. medium temperature:

PMR04.xx.M: bis 40 bar: 80 °C (60 °C with glycerine filling)
 ab 60 bar: 120 °C (100 °C with glycerine filling)
 PMR04.xx.E: 200 °C (100 °C with glycerine filling)

Overload protection:

short-term 1,3-times

Limit contacts:

Designs:

magnetic spring contact

as N/O contact, N/C contact (max. 4 units.)
or SPDT (max. 2 units.)
switching capacity: max. 30 W / 50 VA
switching voltage: 24...250 V

inductive contact

as N/O contact or N/C contact (max. 4 units.)
nominal voltage: 8 VDC
power consumption:
high: >3 mA, low: <1 mA
optional with Ex-certification gem. ATEX
for use in zone 1 or 2

Other contacts designs such as slow action contacts or electronic contacts for direct connection to a SPS on request (for model A, B, and C only).

Description:	Code:
(contact operation with pointer movement in the clockwise direction)	1 = N/O 2 = N/C 3 = SPDT
1 magnetic spring contact, N/O	M1
1 magnetic spring contact, N/C	M2
1 magnetic spring contact, SPDT	M3
2 magnetic spring contacts, switching function x = N/C, N/O or SPDT	Mxx
3 magnetic spring contacts, switching function x = N/C or N/O	Mxxx
4 magnetic spring contacts, switching function x = N/C or N/O	Mxxxx
1 inductive contact, N/O	I1
1 inductive contact, N/C	I2
2 inductive contacts, switching function x = inductive contact	Ixx
3 inductive contacts, switching function x = inductive contact	Ixxx
4 inductive contacts, switching function x = inductive contact	Ixxxx

Advice: For the use of additional electrical equipment in fluid filled devices instead of the glycerine filling an oil filling must be used

Options and accessories:

Description:	Code	for model PMR04
design for increased safety (solid baffle wall and blow-out back)	ES	x.E..., unfilled, not for NG 250, designs A, B only
protective cap of blue rubber	GB	10.M... designs A, D
bright metal bezel	FP	x.E... designs B, E, F
housing suitable for tropical climate	GT	unfilled devices only
indicator element of stainless steel	ZE	x.M... unfilled
indicator element dampened	ZD	unfilled devices only
scale with fine graduations and knife edge pointer	SFS	all models
double-scale (e.g. bar / psi)	SD	all models
multiple scale	SM	all models
scale labeling	SA	all models
refrigerant double-scale dial pressure / R22, R134a, R507 pressure / R22, R12, R502 pressure / R12 pressure / R22 pressure / R507 pressure / R134a	SK... ...1 ...2 ...3 ...4 ...5 ...6	x.M.
refrigerant double-scale dial pressure / R717 (NH3)	SK7	x.E...
print plate for creating special scale (single color or multi-colored)	SS1 SSx	all models
multilayer safety glass	WS	x.M..., unfilled
measuring system free of oil and grease for use with oxygen	MO	all models
measuring system free of silicone	MS	all models
silicone oil filled	FS	x.E..., filled, and with option ES (increased safety)
glycerine filled	FG	only with Option ES (increased safety)
measuring system with excess pressure protection > 1,3 times	U	all models
pressure throttling screw in the connection, d = 0,8 or 0,3 mm	D08 D03	all models
process connection G 1/4 B, 1/4" NPT, 7/16"-20 UNF	Px	all models, nt for NG 250
process connection G 1/4 female, G 3/8 B, 3/8" NPT, M20 x 1,5, small flange DN10, st. steel	Px	all models
process connection M16x1,5 female thread	Px	x.E...
yellow graduations on dial face for N2 or blue graduations on dial face for O2	MG MB	x.M..., unfilled, not for NG 250
red graduations on dial face	MR	all models
red gliding mark pointer in the viewing window	ZR	all models
red gliding mark pointer on the dial face, 1 time or 2 times	ZR1 ZR2	unfilled devices only
maximum pointer can be reset, 1 time or 2 times	ZS1 ZS2	all models
adjustable pointer on bushing	ZZ	all models
can be calibrated as per calibration regulations	E	all models
press. sensor integrated in back of housing	PU	x.E..., unfilled

Models:

model A:
connection at bottom

model B:
connection at bottom,
rim at front

model C:
connection at bottom,
rim at back

model D:
connection on back

model E:
connection on back,
rim at front
panel cut-out:
NG 100: 105 mm
NG 160: 165 mm
